General

To simplify the cable branch design in an overhead installed cable is the Quicktap available.

Quicktap offers a pole mounted connection point with a disconnecting possibility. The unit has an earth connected parking bar on which a disconnected can be parked on.

Quicktap is designed with a phase distance that makes it possible also to connect and disconnect cables with large cross sections.

The possibility to park and earth the cables makes it easier and safer to sectionalise and work in overhead cable systems.

The support insulators on the Quicktap unit can be replaced with surge arresters

Part No.
